Yashvi M. Patel
Age : 21 Years
Sex : Female
UHID : 556

Sample Collected At:
125, Shiv complex, S G Road, Mumbai
Sample Collected By: Mr Suresh
Ref. By: **Dr. Hiren Shah**

Registered on: 02:31 PM 02 Dec, 2X
Collected on: 03:11 PM 02 Dec, 2X
Reported on: 04:35 PM 02 Dec, 2X

B-TYPE NATRIURETIC PEPTIDE (BNP)

Investigation	Result		Reference Value	Unit
Sample Type	Plasma (2 ml)	**TAT :** 1 hr (Normal: 1 - 4 hrs)		
BNP (B-TYPE NATRIURETIC PEPTIDE) CLIA	18.00	Normal	< 29.40	pg/mL

Note:

1. This test should be used in conjunction with medical history, clinical evaluation and other diagnostic procedures
2. Several clinical factors affect the BNP concentration like age, gender, BMI & renal function
3. The most appropriate decision threshold (specificity >97%) for determining heart failure is 100 pg/mL

IntInterpretation:

BNP concentration in patients of Heart failure.

NYHA CLASSES	5TH -95TH PERCENTILE	> 100 pg/mL (%)
I	< 2 - 772	43.1
II	5.4 - 999	58.7
III	21.1 - 1696	82.0
IV	109 - 3157	95.8
ALL	10.8 - 1873	72.6

Comments:

B-type natriuretic peptide (BNP) primarily accumulates in the myocardium and shares similar biological effects with Atrial Natriuretic Peptide (ANP). Elevated BNP levels are observed in individuals experiencing hypervolemic conditions such as congestive heart failure and hypertension. The concentrations of BNP in the bloodstream are directly associated with an increased risk of cardiac events and mortality in heart failure patients.

High Levels:

- Cardiac Causes: Heart failure, Asymptomatic left ventricular dysfunction, Arterial and pulmonary hypertension, Cardiac hypertrophy, Valvular heart disease, Arrhythmia, Acute coronary syndrome.
- Non-Cardiac Causes: Acute and chronic renal failure, Liver cirrhosis, Hyperaldosteronism, Cushing's syndrome.

Clinical Use:

- Confirmation of heart failure in patients with unclear clinical symptoms.
